

# AFO 255 - Print one order

## 255.1 Introduction

The system makes provisions for printing all the details linked to a purchase order. This produces extremely detailed overviews that take up more than a page of A4 per order.

## 255.2 Print one order

If you select this AFO an input screen will be displayed:

The screenshot shows a Windows-style dialog box titled "@BNDP.1 - Order data for". It has a blue title bar with a close button (X) on the right. The main area is light gray and contains two input fields. The first is labeled "Order number" and is empty. Below it, the word "or" is centered. The second input field is labeled "BD number" and is also empty. To the right of these fields are three buttons: "OK", "Cancel", and "Help". The "Help" button has a small 'H' underlined. At the bottom right of the dialog box, there are three small icons: a printer, a help icon, and a close icon.

Here you can enter either an **order number** or a **BD number** (record number) with at least one purchase order linked to it. The system then switches to the standard output procedure.

### Note

In case you have entered a BD number the system will print details of all orders associated with this title.
