AFO 312 Consult received issues

312.1 Introduction

AFO 312 is similar in content to AFO 311- Receive issues except updates are not allowed. Please refer to section 311.1.

With AFO 312 you can display the cardex data (= received and expected issues) for a particular subscription. Given that you cannot change any data with this AFO, you can make this AFO accessible to people who need to view the data, but who are not authorized to make any changes.

If no issues have (yet) been predicted (via AFO 321 or 323) for the subscription for which you are invoking the information, the system displays the screen with the general data as it has been entered for this subscription. No modifications can be submitted within this AFO from this screen, either.
