

# AFO 325 – Count no. of subscriptions

## 325.1 Introduction

This AFO gives you an overview of the number of subscriptions and the number of expected and actually received issues.

## 325.2 Count subscriptions

After you select this option, an information screen is displayed during the counting process. Depending on the size of the file, this can take a few seconds. Next an overview screen appears with the number of expected and actually received issues:

### Note

If there are too many receipts for a subscription (the threshold is around 4400 issues) the system will not allow:

- registering receipts
- inserting new issues
- predicting next three issues

The above report will flag subscription numbers that have reached the threshold.
